Hi, Frances-

I was able to speak with Kim today about OU3. Yes, if the samples taken in Dec. come back dirty we will want them to do more borings to characterize the area for design. Kim really wants something in writing from them explaining why they can't do the sampling sooner than late Dec. She can't see how they can get the 90% report in by Jan 2019 that includes all the Dec. sampling findings and their treatment design, esp. if we have to do more sampling if the samples come back dirty.

Are you in tomorrow? I'll be working tomorrow from AWL. I'll call you to discuss further.

Best,

Michelle-

The question is: if we agree on the number of borings that will be done in December, if they come up dirty, would we want them to do more borings or is the number of borings even if dirty sufficient to characterize the area for design purposes.

Hi, Frances-

I've been on vacation since the 13th, so my apologies for the delay in responding.

Last I remember you had a call with Bruce White. I'm hoping to talk with Kim tomorrow about our plan forward. They are proposing 2 additional borings in an area that would require a shutdown for about 6-8 days. They are saying late Dec. is the next shutdown, but Kim is concerned about our schedule. I'll regroup with her tomorrow and keep you posted.

Best,

Michelle-

Hi Michelle, could you provide me with an update on OU3 and the issue of access to Albea?

Thanks,

Frances
